## FEATURES

### Air effect seat CI4 (+ spinning model)

The lightweight and highly sensitive air effect sheet has been further evolved with the lightweight, high-strength material CI4+. We have pursued even higher sensitivity and improved operability.

### Perfection sheet XT

A reel seat that pursues weight reduction by adopting a high-strength carbon reinforced material CI4 + while maintaining palming performance and by applying lightening to the details.

### Stainless frame SiC guide

Uses a K guide that reduces thread entanglement even when using PE line or nylon line.

### DPS reel seat (S120H-3)

Double lock nut specification that can firmly fix the reel

The long-awaited Spiral X is installed in the NX series that tosses the native trout scene. Succeeded in thoroughly reducing blurring and twisting that cause power loss. The spinning model is equipped with the "Airfect Sheet CI4+", and the bait model is equipped with the "Perfection Sheet XT", which is slimmer and lighter than the previous model, but has improved strength and operability. It is a series that you can enjoy interacting with wild instincts.
