Produce by masakage

M-LARVA series embodying another direction

74 & 88 were developed for natural spooning, and are designed in pursuit of the spoon technique "slack shake" recommended by Masakage.

510 & 610 & 81 are versatile models that can be used not only for spooning but also for minnowing.

The native rod series supervised by Masaki Masakage, which corresponds to various scenes from mountain streams and estuaries to big trout in lakes... that is M-LARVA.
