- Weight:5g / 42mm

As a result of fishing, it is a light game where the difference in flight distance is likely to occur, but with the overflying performance comparable to the series, it can be used comfortably even in fields where small lures are difficult to use. As a harbor, estuary, and small rocky shore, it has never arrived. You can also send lures to the flock. Also, the speed of free fall is one of the attractions. Since the range can be adjusted in a short time compared to other lures, there is a big advantage when the range with fish is deep.
