JETBOOST

SCALEBOOST

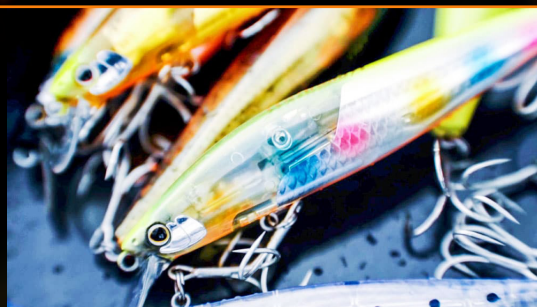

It's not just a reflector attached to the conventional Silent Assassin 99. When installing the flash boost, the body shape, buoyancy, and strength are reviewed, and the optimum balance that does not interfere with the lure's swimming is recalculated.

The stable flight attitude has greatly increased the flight distance. It is possible to approach points that have not been reached so far, and it is a performance that further expands the possibilities of anglers.

Scale boost that reproduces real scales with realistic holograms. The pattern is divided into three types, N (Natural), A (Appeal), and T (Transparent), and stimulates the predatory instinct of fish in various situations.

The basic lure performance of action, distance and operability of the Silent Assassin 99 far exceeds the general standards. It is easy to use and can be experienced by a wide range of people, from advanced users to beginners who are aiming for the first one.
