

SUNAMARU

The body that rolls regularly like a slightly tight spoon action and the blade that rotates while shaking slightly to synchronize attracts flat fish.

- Length : 54mm / Weight : 35g / Hook : #6

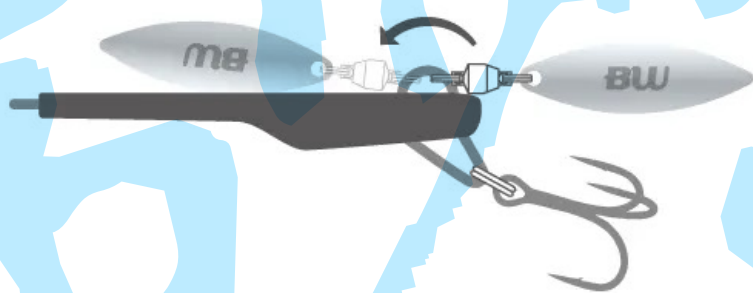

BuddyWorks FEATURE

In order to maintain a regular body roll and stable posture, we dare to adopt a 1-hook system.

The compact size and the structure in which the bite is concentrated on the blade enable high-probability hooking.

Smoothly moves to a position where the blade does not become resistance during flight

By separating the swivel from the body, the hook and blade are less likely to get entangled.

A shape in which the blade rotates between two needles
