PE SCISSORS KIWAMI

Seki cutlery × GEECRACK

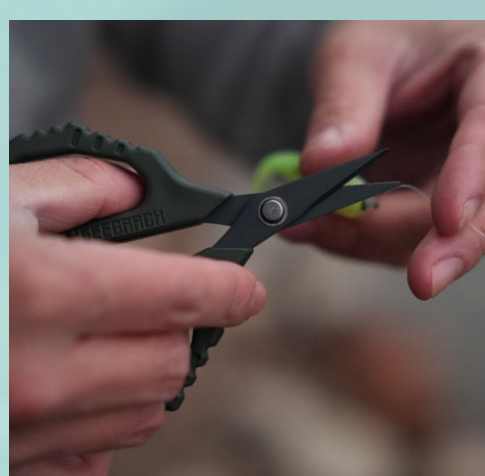

Each piece is carefully finished by the hands of craftsmen.
Scissors for game fishing.

Function 1

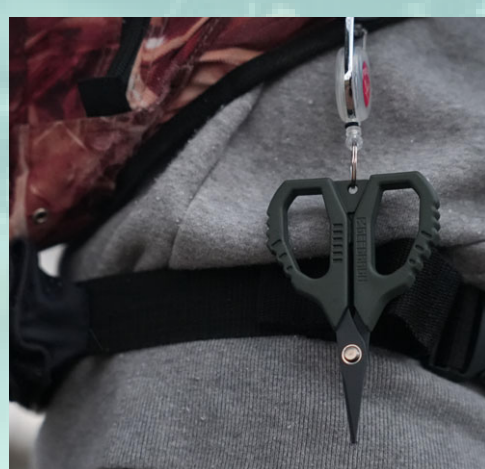

The blade has serrations on one side, and it has an outstanding sharpness that firmly holds the line and cuts PE line without stress.

*The blade part is treated with a fluorine coating that is resistant to rust.

Function 2

The handle is our own original design with an emphasis on ease of use. The hole part is set large so that it can be used even when wearing gloves. The handle part is made of a hybrid material of elastomer and ABS resin, which provides both grip performance and strength.

Function 3

The main body has a hole for attaching a carabiner or cord, so you can attach it to your bag, etc.
