DETAIL

Round head

It has a higher specific gravity than lead and is compact.
The advantage is that a heavy head can be attached to a small hook without compromising the
balance. In addition, because it is simply small, it is difficult to get caught in obstacles, and it also
has the effect of reducing snagging. Because it is hard, the sensitivity on the bottom is also good.

Detailed slender color

Holds tightly without damaging the worm. If you use it, you will be convinced.
It stops well because the worm does not tear when installed.

Hook

Hook sizes #4, #3, and #2 are decoy Limerick bends. It is a small hook that is small but has
excellent strength and is hard to come off. #1 is also a decoy. This is a normal round bend.
It is a custom-made hook that is firm with the thickness of the wire raised by one standard.
