TANEMAKI BOOSTER BALL

Amino acids favored by fish are dissolved in a unique blend.

Since it is wrapped in a film that dissolves in water, the ingredients diffuse in the water, It is possible to target the tana and appeal to the fish's sense of smell.

How to use

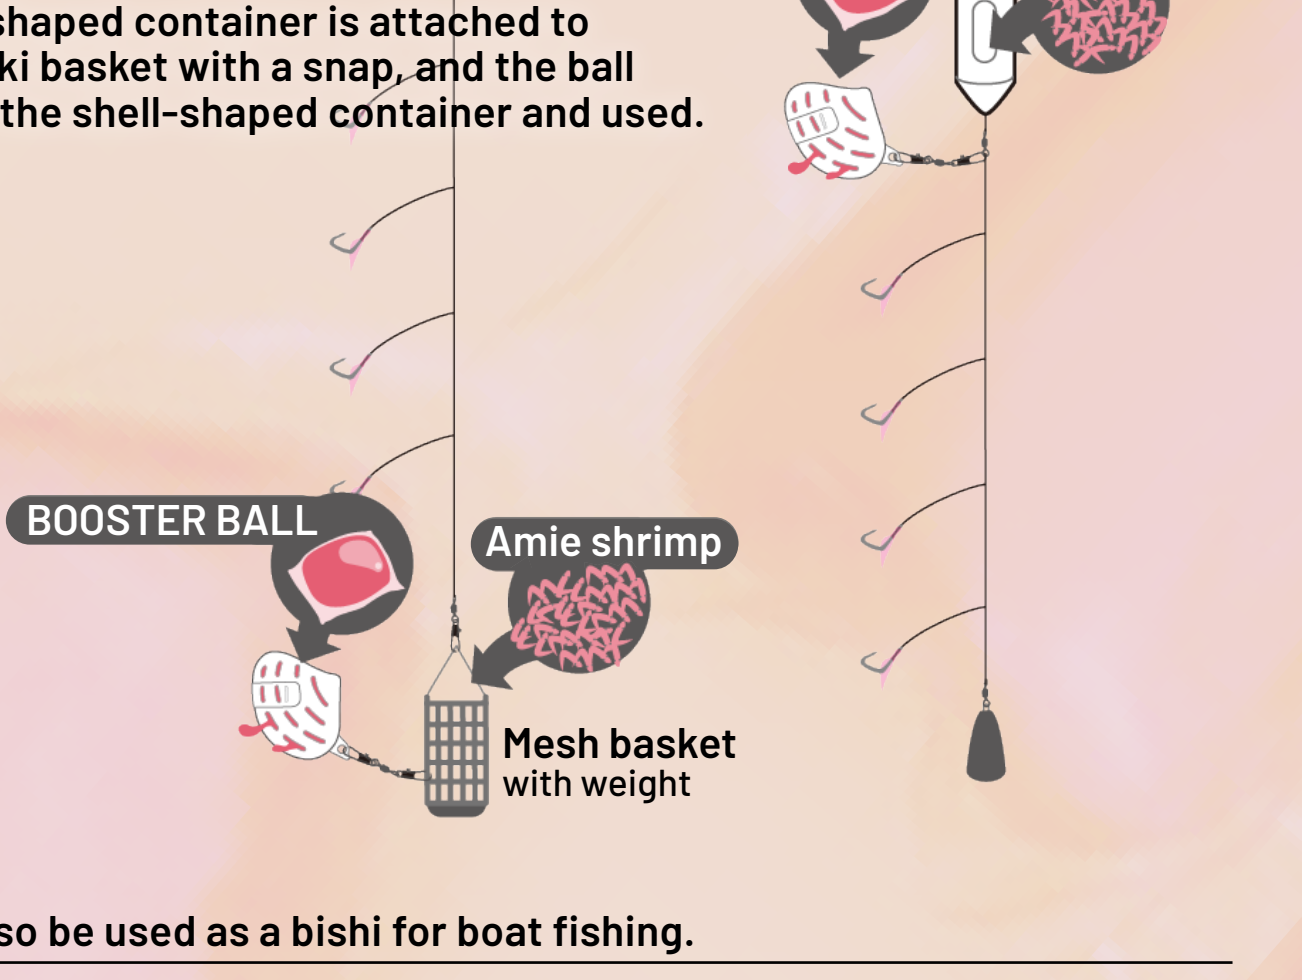

A ball wrapped in a film that dissolves in water and the extract is added to the komase, mysid shrimp, etc. and used. The extract dissolves in water and appeals to horse mackerel, mackerel, sardines, etc.

When using for sabiki fishing

Method 1
Put the ball in a sabiki basket with a lid
*It is effective when put together with Amie shrimp.

Method 2
A shell-shaped container is attached to the Sabiki basket with a snap, and the ball is put in the shell-shaped container and used.

★Can also be used as a bishi for boat fishing.

Product features

1. Proprietary blend of feeding activation extract "Packamine V4"

We have developed an original blend of extracts centered on amino acids that activate fish feeding. Since this extract contains amino acids dissolved in a liquid, the fish reacts well, and it is possible to target the target tana with a different appeal from bait and komase.

2. Pack type ball type that is easy to carry

When using bait and komase, there are times when you have to carry a lot of food, and sometimes it is troublesome to prepare. With this product, you can easily carry as many as you like, so it's easy to hide in your tackle box as a reassuring support item.

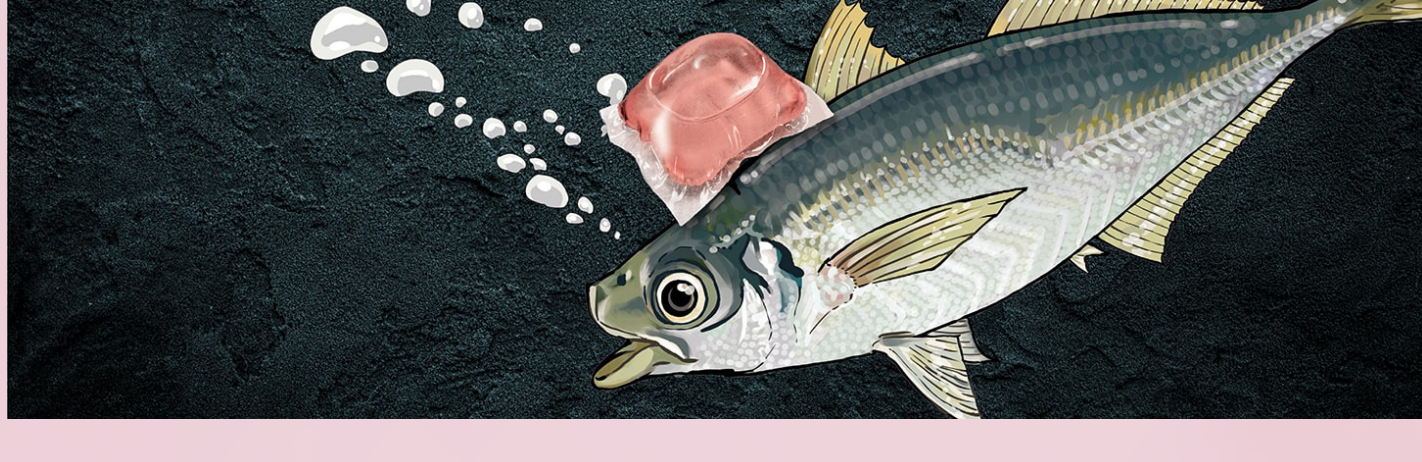

3. Sea-friendly product design

The special film is completely soluble in water and biodegraded by microorganisms into water and carbon dioxide. The contents of the ball are made by selecting ingredients with low persistence and high degradability. You can enjoy fishing while considering the environment.

The special film will melt over 5-10 minutes.

*The time it takes for the film to melt varies depending on the water temperature, current, and water quality.

[Active ingredients] Amino acid, seafood extract

Precautions for use

The special film that wraps the "ex-ball" dissolves in water.

*Please use the lid of the tray and be careful not to get the ball wet with seawater. Not suitable for rainy day fishing.

*If the extract ball in the dedicated container is not completely melted before it is put on land, the extract may stain the boat and fishing gear. If the extract adheres, wipe it off with a wet towel or wash it off with sea water.

- This product is not edible.
- Do not put the ball or special container in your mouth or swallow it. There is a risk of suffocation.
- Keep out of reach of children and pets.
- To prevent accidental ingestion by people with dementia, be careful where you put it.
- Do not push or squeeze the ball. It may break and the extract may pop out.
- Avoid high temperature, high humidity and direct sunlight, and store in an environment with little temperature change below 40°C.
- After opening, do not leave it for a long time. Use it as soon as possible.
- Do not store together with items that may transfer odors.
- Avoid storing in locations subject to rapid temperature changes. Condensation may tear the special film.
- Since this product uses food ingredients, there may be rare cases of discoloration or sedimentation in the liquid, but there is no difference in essential performance.

★This product was developed to make fishing more comfortable. Do not use it for purposes other than fishing.
