(Common to floating and suspend)

WAVY HAIR MODEL

Wavy hair that invites you with a delicate and natural look full of life

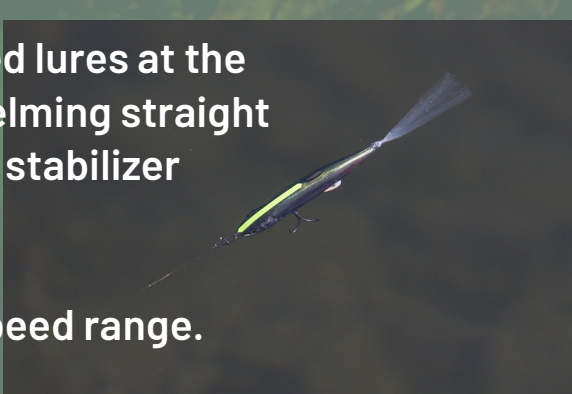

DAZZLER HAIR MODEL

Tailbite reduction, dazzler hair tempting with flushing effect

F E A T U R E S

Airow 65 has all the abilities required for i-shaped lures at the highest level. The biggest feature is the overwhelming straight line performance that does not shake due to the stabilizer effect designed at the bottom of the body. From slow to fast speed, it maintains a beautiful straight trajectory without disturbance in any speed range.

The floating model is basically left on the surface of the water, but if you dive with one jerk, it will dive and rise from the head to imitate small fish that peck at the surface of the water.

The suspended model has the optimum specific gravity setting for slow speed i-shaped retrieve just below the surface of the water. Drift fishing is also effective, depending on the flow and wind.

A rolling swivel is used for the hook eye, which reduces water resistance and at the same time adopts a structure that is hard to come off even in severe head shake. Install your own wavy hair on the rear to create a live feeling like a living creature. Two new 3DR shrimp colors are available. It is fully compatible with the topical "surface layer shrimp pattern" in Kasumi water system.
