FEATURES

A high-performance compact 2-speed lever drag reel that is ideal for jigging and is equipped with an ergonomic grip and T-Bar handle. Fight against big guys with aggressive high speed and forceful low speed.

Uses a machine-cut, highly rigid frame

CAVALLA has a machined rigid frame construction. It uses a one-piece, fully machined aluminum frame. This rigid aluminum body is the ultimate precision body design that withstands more pressure and torque than any other aluminum material used in the fishing industry.

Made of 17-4 grade stainless steel material main pinion gear

The drive system incorporates two sets of strong stainless steel main/pinion gears, ensuring interaction with big game.

2 speed gear

Depending on the situation, you can choose a high gear for faster winding speed or a lower gear for transmitting more force. Changing between high and low gears can be done by simply pressing a button and operating the shift lever.

ERGO GRIP KNOB

The handle knob has an ergo-grip design and is large enough to be easily gripped and transmit force. This handle knob is ergonomically designed to fit in the palm of your hand, and OKUMA uses it on many of its reels.
